

Name : Reham Mohamady

Logical model description

Use Galaxy Schema because the case study has 3 business processes **Fact**

table:

- Marketing ○
- Reservation ○
- Customer Care

Dimensions

table:

- Flights ○
- Passengers ○
- Problems ○
- Promotions ○
- Tickets ○

- Date
- Aircrafts
- Reservation
 - Channel

Marketing Fact Table: connected to five Dimension Tables

- † **Promotions:** cover promotions offered by the airline company and their values
- † **Passengers :** cover personal information of passenger and traveling miles and their type (Aluminum, Gold, Platinum, or Titanium)
- † **Date :** represents the date at which the ticket has been bought and other important dates
- † **Tickets :** cover the reserved ticket and the seat number. Upgrade column is by default 0 mean ticket class has been not upgraded and 1 if ticket class has been upgraded
- † **Flights :** cover the flight destination and departure city. It also shows the flight duration

Customer Care Fact Table: connected to five Dimension Tables

- † **Passengers :** cover personal information of passenger and traveling miles and their type (Aluminum, Gold, Platinum, or Titanium)
- † **Date :** represents the date at which the ticket has been bought and other important dates
- † **Flights :** cover the flight destination and departure city. It also shows the flight duration
- † **Aircrafts :** This allows the finance team to keep track of the company's expenses
- † **Problems :** represents passenger complaints and the level of the problem

Reservation Fact Table: connected to six Dimension Tables

- † **Passengers :** cover personal information of passenger and traveling miles and their type (Aluminum, Gold, Platinum, or Titanium)
- † **Date :** represents the date at which the ticket has been bought and other important dates
- † **Tickets :** cover the reserved ticket and the seat number. Upgrade column is by default 0 mean ticket class has been not upgraded and 1 if ticket class has been upgraded
- † **Flights :** cover the flight destination and departure city. It also shows the flight duration
- † **Reservation Channel :** represents the channel used to book the ticket
- † **Aircrafts :** This allows the finance team to keep track of the company's expenses

physical data model

Use SQL Server To Create Table And Schema

```
--Ahmed Mohamed Youseff
